PERMA MARK SURVEYOR'S MARKER

"NOW they fix it!"

Short lengths of reinforcing rod or pipe are often driven into the ground to form semi-permanent survey markers or reference points. They generally are left projecting a few inches above the ground surface.

To correct a potential hazard to people and livestock, especially horses, it has been suggested a yellow plastic cap be installed on the marker. The color also calls attention to the marker, making it easier to find or avoid, as the case may be.

These inexpensive caps are available from Forestry Suppliers, Inc., 205 W. Rankin Street, Box 8397, Jackson, Mississippi, 39204

<u>Stock</u>	<u>Size</u>	<u>Fits</u>	<u>Price per 100</u>
39494	1/2" plug	1/2" pipe or #3 re-bar	\$10.00
39495	3/4" plug	3/4" pipe or #4 re-bar	11.00
